 GPT 4.1

Prompt 1

- Instructions
- Requirement(s) to formalize
- Format of formalized requirements (JSON schema)
- Allowed compliance patterns

Prompt 2

- Instructions
- Formalized requirements
- Process model (PDF)
- Format of compliance deviations

Step 1

Formalize Requirements

1.1 - Load config. file (e.g., temperature, model)

1.2 - Query LLM to formalize the requirement

1.3 - Validate and normalize output

1.4 - Generate metadata

Step 2

Extract Atomic Change Operations Between Modified Requirement Pairs

2.1 - Load config. file (e.g., similarities threshold)

2.2 - Calculate atomic change operations between requirements

2.3 - Generate metadata

Step 3

Calculate Impact of Requirement Changes in Process Model

3.1 - Load config. file (e.g., temperature, model)

3.2 - Query LLM to detect compliance deviations

3.3 - Generate metadata
