

Set of Three Requirements Modified After a Change in a Clinical Guideline

1	Original Requirement (r1): If local anesthesia is administered and the patient has a high tolerance to anesthesia, the patient must be asked every 20 minutes if they are experiencing any pain . Modified Requirement (r1'): If local anesthesia is administered and the patient has a high tolerance to anesthesia, additional anesthesia must be administered every 20 minutes.
2	Original Requirement (r2): Before a surgical intervention, the nurse must obtain the patient’s consent. After obtaining consent, the nurse must conduct a “time out” procedure. Modified Requirement (r2'): Before a surgical intervention, the nurse must obtain the patient’s consent. After obtaining consent, the doctor must conduct a “time out” procedure.
3	Original Requirement (r3): If the patient is over 65, a nurse must approve discharge before the patient is discharged, and approval must occur within 24 hours prior to discharge . Modified Requirement (r3'): If the patient is over 65 or has more than 5 medications , a doctor must approve discharge before the patient is discharged.

Impact of Modifications on a Process Model (), Non-compliant Components (), Over-compliant Components ()
